Global Staffing

AI & Product Engineering

Overview

We help funded startups and growth-stage companies turn product ideas into working software — fast. We specialize in AI-first MVPs, proofs-of-concept, and automation solutions, combining consulting-style discovery with hands-on engineering delivery.

We're not a dev shop. We're an embedded product team that owns outcomes from architecture through deployment.

How We Work

Discovery Phase

We ground your idea before we build. Collaborative sessions define the problem, map user needs, and produce a technical blueprint—so development starts with clarity, not guesswork.

➤ Deliverables

Blueprint, Product Requirements, Technical Architecture, UI/UX Mockups

Build Phase

Dedicated project pods deliver working software in focused Cycles. Weekly demos keep you in the loop. AI is used where it improves speed, quality, or usability, not as a gimmick.

➤ Engagement Types*

- Proof of Concept (1–4 weeks): Validate technical feasibility before committing
- MVP (4–12 weeks): Ship core features to real users for market validation
- Production-Ready (12–20 weeks): Enterprise-grade deployment with hardened infrastructure

*All timelines are subject to refinement based on scope, complexity, and client readiness

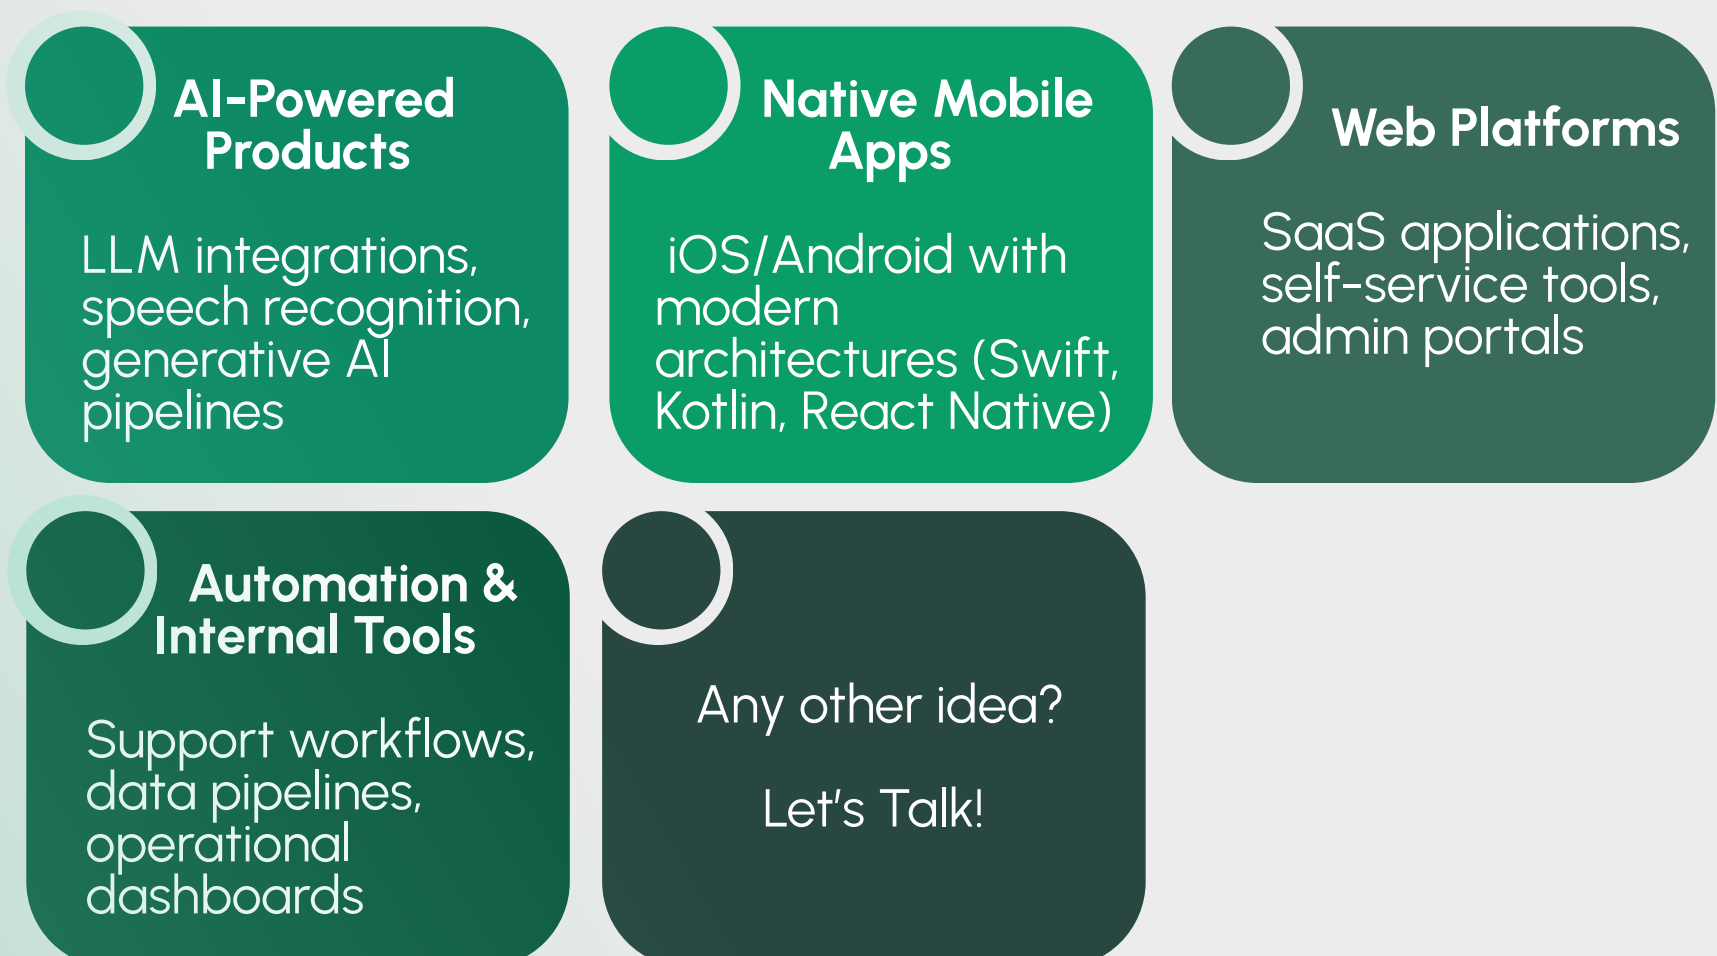

Scale Phase

Once validated, we can transition you to a dedicated team through Global Staffing (LATAM/Asia) or continue with ongoing maintenance and feature development.

Why DevSavant

- ➔ **Senior Technical Leadership:** Every project is led by our Director of AI & Software Development, not handed off to junior staff. Quality doesn't slip.
- ➔ **Discovery-First Approach:** We invest in understanding your problem before writing code. Upfront clarity prevents expensive rework.
- ➔ **Competitive Economics:** LATAM + Asia talent networks deliver strong value without sacrificing quality. Typical margins allow us to price competitively against US-based shops.
- ➔ **Clear Path Forward:** Start with a PoC. Validate with an MVP. Scale with a dedicated team. You're never locked in.

What We Build

Ideal For

- ➔ Funded startups ready to build their first product or validate a new direction
- ➔ Growth-stage companies without engineering capacity who need to ship quickly
- ➔ Teams with AI ideas but no in-house implementation expertise
- ➔ Companies replacing manual processes with intelligent automation

Get Started

[Book a discovery session](#) and validate your idea in 1–2 weeks!
